

# ISD Projects

Interactive Systems Design

Laurea Magistrale in Informatica

Anno Accademico 2018-2019

## Project Work

- Develop and evaluate a novel efficient text entry method for smart watches
- Steps:
  1. Search related literature
  2. Develop the technique
  3. Design the Experiment
  4. Develop the experimental software
  5. Analyze results
  6. Write the report

## BubbleBoard

- ❑ Method based on a soft keyboard with a QWERTY layout (by V. Fuccella and B. Martin)
- ❑ Problem: the keyboard is too small to contain a full layout
- ❑ Solution: at the same time...
  - ❑ Only characters from a small set (bubbles) are enlarged and can be entered through a *tap*
  - ❑ Other characters cannot be pressed. They can become bubbles by pressing near their location
  - ❑ Il *Leipzig Corpora News-typical 2016* è un insieme di 1 milione di frasi scaricabile da <http://wortschatz.uni-leipzig.de/en/download/>

## Language-based improvement

- In the worst case, the KSPC (number of taps to enter a character) of Bubbleboard is 2: one to zoom and one to select the character
- Improvement I: enlarge the most frequent characters (static layout)
- Improvement II: choice of the key to enlarge (dynamic layout)
  - After a character is entered, we can predict next and enlarge the corresponding key
  - E.g.: in Italian, after entering «q», the next character is «u» with very high probability
- Possible language model: «trigraph model»
  - I observe the last two character entered and predict the third one.
  - I need a corpus for language analysis: *Leipzig Corpora News-typical 2016* is a set of 1 million phrases <http://wortschatz.uni-leipzig.de/en/download/>

## BubbleBoard: static layout

- Best layout with 6 keys per line, max 3 char per key
- Estimated KSPC: 1.3257

| Initial layout                     | After pressing <b>qw</b>           | After pressing <b>q</b>             |
|------------------------------------|------------------------------------|-------------------------------------|
| –<br>do you like to shop on sunday | –<br>do you like to shop on sunday | q–<br>do you like to shop on sunday |
| qw e r t yui op                    | q w er t yui op                    | qw e r t yui op                     |
| a s dfg h jk l                     | a s dfg h jk l                     | a s dfg h jk l                      |
| zxc vb n m _ ←                     | zxc vb n m _ ←                     | zxc vb n m _ ←                      |

## BubbleBoard: dynamic layout

- Best layout with 6 keys per line
- Estimated KSPC: 1.1475

| Initial layout                 | After pressing <b>yuiop</b>    | After pressing <b>y</b>         |
|--------------------------------|--------------------------------|---------------------------------|
| –<br>you want to eat your cake | –<br>you want to eat your cake | y–<br>you want to eat your cake |
| q w e r t yui op               | qw ert y u i o p               | q w e rty ui o p                |
| a s d f ghj k l                | a s d f ghj k l                | a s dfg h j k l                 |
| zxc v b n m _ ←                | zxc v b n m _ ←                | zxc v b n m _ ←                 |

## Preliminary Experiments

- Static VS Dynamic - 12 participants, 2 sessions of 5 ph

AVG SUS scores:

- Static: 81.45
- Dynamic: 75.83

Preference:

- Static: 25%
- Dynamic: 75%

## SplitBoard

Hong, Jonggi, et al. "SplitBoard: A simple split soft keyboard for wristwatch-sized touch screens." *Proceedings of the 33rd Annual ACM Conference on Human Factors in Computing Systems*. ACM, 2015.

- Soft keyboard designed for smartwatches
- As the user flicks left or right on the keyboard, it switches between the left and right halves of a QWERTY keyboard.

## Preliminary Experiment II

- ▣ **Static BubbleBoard VS SplitBoard**
- ▣ 2 participants, 5 sessions of 5 ph each

## Project objectives

- ▣ Improve the implementation of BubbleBoard
- ▣ Perform experiments:
  - ▣ Compare versions
    - ▣ static, dynamic
  - ▣ Display shape (square, circular)
  - ▣ Ambiguous version?
- ▣ Compare to other methods (SplitBoard, ...)
